Flooding Risks from Global Warming

Based on the indexed EngineHouse sources, the primary flooding risk identified is **sea level rise driven by ocean warming and melting ice**. ## Sea Level Rise The sources establish the causal mechanism clearly: **Passage 6** (WMO statement) notes that "the warming ocean and melting land-based ice are driving the long-term rise in global mean sea level rise." This is corroborated by **Extracted Claim 2** and **Consequence 4**, which identify ocean warming as the direct driver of long-term se...
